DETAILED ACTION

Claims 10, 11 and 13-15 are pending in this application.

Request for Continued Examination (RCE)

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 22, 2002 has been entered.

Action Summary

2. The rejection of record under 35 U.S.C. 102(e) over Mettler is being maintained for the reasons stated in the previous office action.
3. The rejection of record under 35 U.S.C. 103(a) over Cronk is being maintained for the reasons stated in the previous office action.

Response to Arguments

4. Applicant's arguments filed March 22, 2002 have been fully considered but they are not persuasive.

Applicants argue that Mettler fails to disclose or suggest with any specificity the use of a particular fragrance. Also argued is that Mettler fails to disclose or suggest the composition capable of reducing cortisol levels and/or increasing sIgA levels of the mammal or that it is directed to a method of soothing a mammal. It is argued that Cronk does not disclose the use of a sensory fragrance, the particular fragrances, reducing

Art Unit: 1616

cortisol levels and/or increasing sIgA levels of the mammal, and the claimed materials according to claim 15. It is the position of the examiner that Mettler does disclose the claimed invention. Column 3, lines 33-41, discloses various fragrant oils which can be employed in the invention such as orange, rose and lavender. The composition of the prior art would inherently have the properties of reducing cortisol levels and/or increasing sIgA levels of the mammals since Mettler teaches the claimed invention. It is the position of the examiner that Cronk also discloses the claimed invention. Column 9, lines 35-67 bridging column 10, lines 1-39, describes fragrances and aromatic medications which are created by blending materials comprising odoriferous essential oils. These oils can be extracts from wood, flowers, or resins. Also, other fragrances or odoriferous compounds that can be used are benzaldehyde (aldehyde), benzyl acetate (ester) (col. 9, line 67), citronellol (alcohol) (col. 10, line 2), benzyl salicylate (benzenoid) (col. 10, line 33), and methyl dihydrojasmonate (ketone) (col. 10, lines 37-38) all of these compounds are in claim 15. It is the opinion of the examiner that the results of lower cortisol levels and/or increased sIgA levels can be achieved also by spraying an air freshener containing the fragrance, since claim 10 is directed only to a composition comprising a fragrance. It is the position of the examiner that since the prior art teaches the claimed invention then it will possess the properties of reducing cortisol levels and/or increasing sIgA levels of the mammal. The showing of unexpected results according to the applicant is not convincing to the examiner. It is the position of the examiner that applicant has not shown certain features of the tests such as how long where the panelist in the bath, the disposition of the panelist before the bath, the

Art Unit: 1616

amount of water in the bath, who where the panelists, the composition of the water with the ingredients, etc.

Conclusion

5. Claims 10, 11 and 13-15 stand rejected.
